Capgemini

Accelerated Solution Design

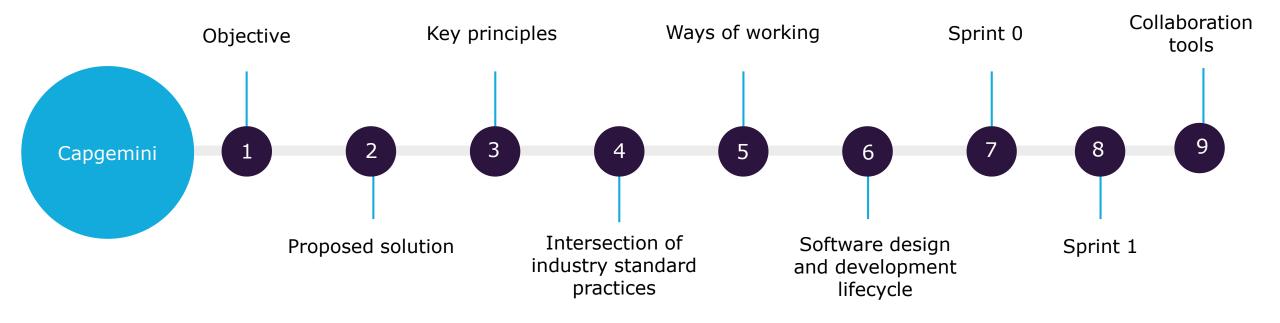

Valencia, March 2018, ADCenter

Challenges of Software Design

Objective

Formalize Software Design in the context of the Capgemini ADCenter concept or other forms of agile Delivery within Capgemini to better understand, apply and promulgate well known design principles, processes and professional practices

Proposed solution: Accelerated solution design

X	A methodology	A practical guideline	✓
X	A static, fixed document	A "living" document	✓
X	Based on proprietrary methods	Based on industry standards	✓
X	Separate agile teams	The intersection of industry standard practices	✓
X	Only focused on technical/architectural design	Encapsulating business requirements, functional definitions and Architecture design	✓

Key principles

ASD begins as a design, evolves into a system specification and ends as documentation

Involve end users in the development lifecycle

Learn and apply continuous improvement

Visualize

Be iterative

Improve communication and collaboration among the teams (Customer, Design team and Development team)

Intersection of industry standard practices **User story mapping** Talk about the user journey through your product **Accelerated Solution** Design **Domain Driven UX Design Sprint** Design Rapid visual prototyping Modelling the real-world and testing

system or process

Ways of Working

Process to be followed at the AD Center to deliver the solution

Continuous validation

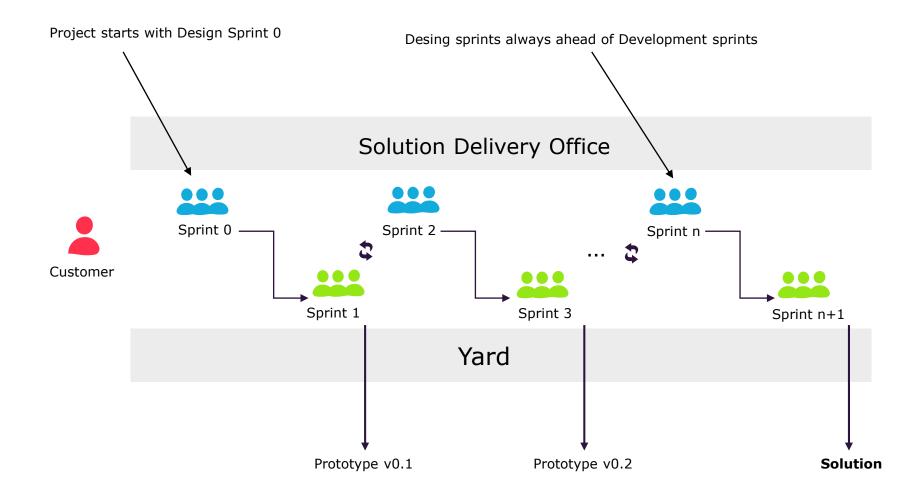

This process sinthesizes the essence of the **Design Sprint**.

The Solution Design Office and Development team will **work together** to model, test and improve the system design.

Software design and development lifecycle

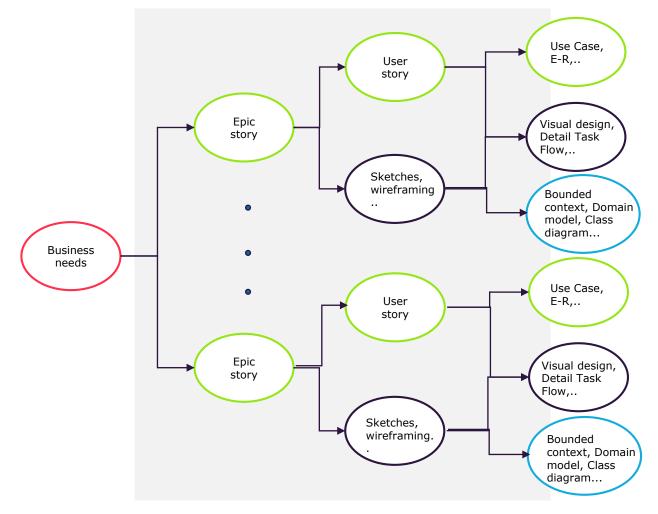

Agile design flow

The Solution Delivery Office (SDO) will follow this agile design flow to model the solution for the business needs.

The Solution Delivery Office will meet the customer to understand those needs, extract the user journey and ideate the possible uses of the product.

Those elements will be used to articulate and validate with customer a collection of epics, user stories and sketches that shall give meaning and value to the software, APIs and interfaces. In the end, the Solution Delivery Office shall create all the necessary support material for development.

Solution Design sprint

Sprint where the Solution Delivery Office get to **understand** the **needs** of the customer, why they are necessary and what is the **Minimum Viable Product** (MVP) that provides the most value to customer.

Core team

- Business Analyst
- UX Designer
- Architect

Explore and define

Sprint 0

The end result is a clear definition of the problem and a framework for the solution.

Ideate and prototype

Sprint 0

The end result is a validated concept with brand/visual design vision, content strategy, interaction design guidelines and a proven technical solution to accelerate development.

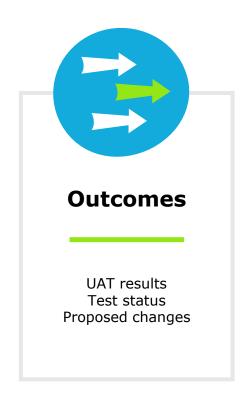

Empathize and test

Sprint 0

The ultimate end result is a complete solution accepted by the customer.

Development sprint

Sprint where developers **develop** the software **solution** and produce all the necessary prototypes.

Core team

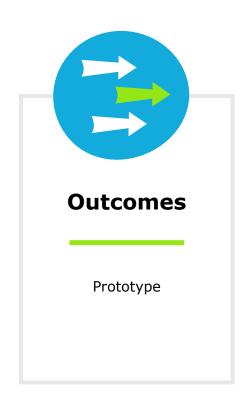

Developers

Ideate and Prototype

Sprint 1

The end result is a prototype that implements the user stories included in the sprint backlog.

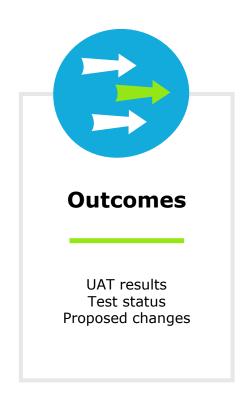

Empathize and test

Sprint 1

The ultimate end result is a complete solution accepted by the customer.

Collaboration tools

The team shall use collaboration software to share and communicate the design and implementation of the solution.

There will be two supported options:

Conclusions

How the project leader understood it

How the analyst designed it

How the programmer wrote it

What the beta testers received

How the business consultant described it

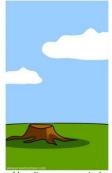

How the project was documented

What operations installed

billed

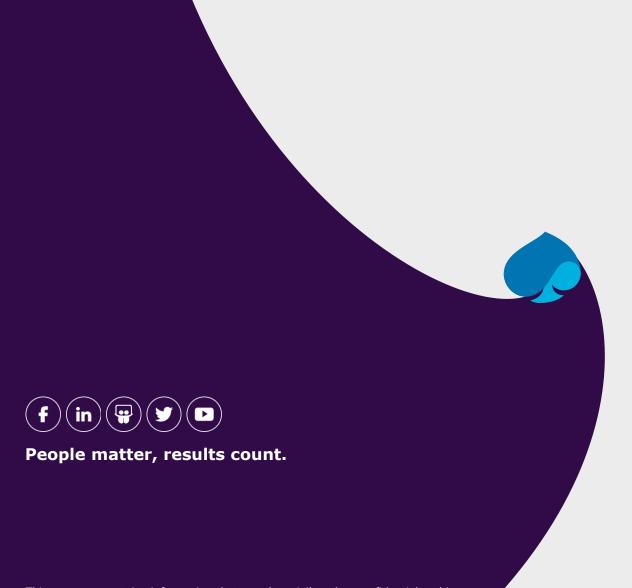

How it was supported

What marketing advertised

What the customer really needed
